

COMPENG 2SH4 Project – Statement of Contribution

Your Group Name Hermin3-Kapuri2

Your Name Nerar Hermiz

Your Team Member's Name Ishan Kapur

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.

Personally, I worked on iterations 1B and 2B as well as collectively worked with my partner on iterations 0 and 3.

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.

My partner worked on iterations 1A and 2A and worked collectively with me on iterations 0 and 3.

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.

This was my first ever time working with someone for software development. I think this experience was very different than having a partner in other subjects as software development has to do with a lot of thinking as well as occasional trial and error. Whereas in other courses it is easier to share ideas and collectively come up with a solution. It was very nice to have two people attacking one problem but we also had our issues with pushing and pulling in VScode. We also found it inconvenient as one of us is in Mississauga and the other in Burlington, so we did not get much opportunity to meet in person, so we had to resort to calling each other to work on iterations 0 and 3. Overall, I believe that this was definitely a good experience as I have always coded by myself and it was a good learning experience to have for my future jobs or projects.
